

# LOTI: Innovation in Social Care Deep Dive

## Executive Summary

### Context & Setting

With the number of people requiring social care at an all-time high - a figure that is only going to increase as the 'cap and meter' system comes online in 2023 - local authorities urgently need to address current models of provision. To help support London boroughs - and the capital more widely - LOTI commissioned CC2i to conduct a survey into social care innovation to understand how digital solutions can support health and social care services in 2022 and beyond.

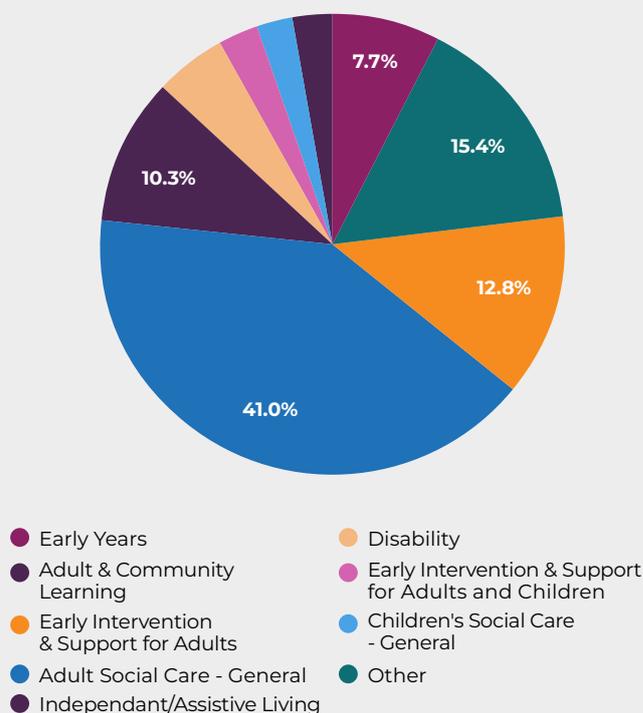

### Social Care Survey

The Social Care Survey was an open call to all UK based software providers and technology experts working in social care, and collected the latest information on social care technology innovation across key themes and categories. Submissions ranged from enterprise-scale integrated social care platforms to personalised apps for individuals and community-led approaches.

Each solution aligns with key areas identified by LOTI as outlined in the chart (right). They also align with key categories: Self Service, Strength Based, Case Management, Information Sharing, Assistive Tech, Data Analysis & Prediction, Carer Tech, Asset Management).

### Which of these areas does your solution most closely align with?

60+ responses

### Social Care Technology Innovators Database

All the key comparable information on each technology solution collected in the survey can be found on the [LOTI website](#). With specific information on:

- How the solutions support the Integrated Care System model
- How solutions support the Digital Switchover

- Pricing models
- How the solutions address the Health & Care Bill
- How the providers assess the challenge their solution seeks to address
- Evidence of system/user/financial benefits
- Provider contact details & links

### Recommendations

With four social care policy papers published in the last six months and the incoming ICS model and significant funding reform on the horizon, there is a window of opportunity to swiftly address how digital can play a more comprehensive and valuable role in the delivery of social care. For the full report and survey findings, visit the [LOTI website](#).
